

HisabDo AI — Day 20 Final MVP Specification & Acceptance Plan

Final MVP validation, integration review, documentation, demo, reporting, and delivery plan

1. Day 20 Objective

Day 20 is the final MVP completion and acceptance phase. The objective is to review the complete Day 7–19 implementation, validate every AI feature and integration, resolve critical remaining issues, complete end-to-end testing, finalize documentation, prepare the final demo, and deliver an accepted MVP.

Golden rule: all financial numbers, calculations, forecasts, anomaly values, scores, and recommendation facts must come from verified backend/calculation-engine data. AI may explain verified results but must not invent or independently calculate financial values.

2. Final Day 20 Requirements

#	Requirement	Acceptance Evidence
1	Define/finalize Day 20 final MVP requirements	Approved scope and acceptance checklist
2	Review complete Day 7–19 implementation	Feature-by-feature review completed
3	Review all AI features and integrations	Integration/API/AI validation record
4	Verify Financial Health Score	Score and explanation validated against backend
5	Verify Spending Pattern Intelligence	Verified patterns and insights validated
6	Verify Anomaly Detection	Anomaly types and backend results validated
7	Verify Cash-Flow Forecasting	Forecast values and assumptions validated
8	Verify Budget Recommendation	Budget outputs validated against rules/data
9	Verify Ask HisabDo AI	Question-to-data-to-answer flow validated
10	Verify AI Recommendation Engine	Triggers, priority/severity, and explanations validated
11	Verify Mobile Integration	Flutter API/display/error flows validated
12	Verify Web Integration	Dashboard/API/display flows validated
13	Review testing and validation results	Test report and unresolved cases reviewed
14	Review/prioritize remaining bugs	Severity/priority and owner assigned
15	Coordinate final fixes	Jaffer, Omesha, Aarti, Laiba fixes tracked
16	Complete end-to-end MVP validation	Full user journey passes
17	Finalize documentation	Technical/user/API/demo docs complete
18	Prepare final demo flow	Repeatable demo script and dataset ready
19	Prepare final MVP status/report	Final status report completed
20	Final acceptance and delivery	Acceptance checklist signed/approved

3. Feature-by-Feature Verification

Financial Health Score

- Verify required financial inputs are available and user-isolated.
- Verify income, expense, saving rate, expense ratio, budget utilization, cash flow, and six-factor score inputs.
- Verify final 0–100 score matches backend calculation output.
- Verify AI explanation uses only verified score/result data.
- Test missing/insufficient data behavior.

Spending Pattern Intelligence

- Verify top categories, frequent expenses, monthly/current-vs-previous comparisons, and increasing/decreasing trends.
- Validate calculation outputs against sample transactions.
- Verify AI insight contains no unsupported financial values.

Anomaly Detection

- Verify Unusual Amount, Sudden Spending Spike, Unusual Category, and Duplicate Transaction.
- Verify historical baseline/threshold logic.
- Verify anomaly result is generated by backend logic.
- Verify AI only explains verified anomaly data.

Cash-Flow Forecasting

- Verify available 3–6 month history where applicable.
- Verify expected income, expenses, savings, and closing balance.
- Verify assumptions, confidence/limitations, and insufficient-data behavior.
- Compare forecast outputs with available actual/historical data.

Budget Recommendation

- Verify category budgets against income, historical spending, existing budgets, and utilization.
- Verify overspending/underspending rules and savings opportunities.
- Verify AI explains only verified recommendation values.

Ask HisabDo AI

- Validate question classification and query-to-backend-data mapping.
- Test income/expense, spending/category, budget, health, anomaly, cash-flow, and budget-recommendation questions.
- Test unsupported, ambiguous, and missing-data questions.
- Verify no invented financial amounts.

AI Recommendation Engine

- Verify triggers from health, spending patterns, anomalies, forecast, budget status, and budget recommendations.
- Verify recommendation type, reason, action, priority, and severity.
- Verify multiple recommendations are consistently prioritized.
- Verify AI explanation preserves verified facts and does not create new recommendations.

4. Mobile and Web Integration Validation

- Validate API authentication/authorization and user data isolation.
- Validate mobile and web response models against backend DTOs.
- Validate Financial Health, Spending Pattern, Anomaly, Forecast, Budget Recommendation, Ask HisabDo, and Recommendation Engine flows.
- Validate loading, success, empty-data, insufficient-data, validation-error, API-error, and timeout states.
- Verify AI messages are concise, understandable, and based only on verified backend outputs.
- Verify no UI displays fabricated or unsupported financial numbers.

5. Final Bug Review and Fix Process

- Collect all open issues from Days 7–19.
- Classify each issue as Blocker, Critical, High, Medium, Low, or informational according to the team's agreed severity definitions.
- Fix or explicitly defer non-blocking issues with documented reason.
- Assign owners to Jaffer, Omesha, Aarti, Laiba, or Taha as applicable.
- Retest every fixed issue and record evidence.
- No blocker/critical issue should remain open for final MVP acceptance unless explicitly approved as a known limitation.

6. End-to-End MVP Validation Flow

1. Authenticate a test user.
2. Load verified financial data for that user only.
3. Generate Financial Health Score.
4. Generate Spending Pattern Intelligence.
5. Run Anomaly Detection.
6. Generate Cash-Flow Forecast.
7. Generate Budget Recommendation.
8. Generate AI Recommendation Engine results.
9. Ask financial questions through Ask HisabDo AI.
10. Display results in mobile application.
11. Display results in web dashboard.
12. Verify all values against backend/calculation outputs.
13. Test missing-data and error paths.
14. Record pass/fail evidence and resolve remaining blockers.

7. Documentation Deliverables

- Final architecture overview
- Feature specifications and acceptance criteria
- Backend/API documentation
- AI prompt and no-invention rules
- Data mapping and DTO documentation

- Testing and validation report
- Known limitations and assumptions
- Deployment/setup instructions
- Mobile integration notes
- Web integration notes
- Final demo script
- Final MVP status report

8. Final Demo Flow

1. Introduce HisabDo AI and the problem it solves.
2. Show a real/test user's verified financial data.
3. Show Financial Health Score and explanation.
4. Show spending patterns and category trends.
5. Show a verified anomaly.
6. Show cash-flow forecast and assumptions.
7. Show budget recommendation.
8. Show AI Recommendation Engine output with reason/action/priority/severity.
9. Ask HisabDo a financial question and show data-grounded answer.
10. Show the same AI insights in mobile and web interfaces.
11. Demonstrate missing/insufficient data handling.
12. Close with testing status, limitations, and final MVP acceptance.

9. Final Acceptance Checklist

- All Day 7–19 committed work reviewed.
- All seven core AI capabilities verified.
- Mobile integration verified.
- Web integration verified.
- User isolation/authorization verified.
- No invented financial numbers in AI output.
- Backend/calculation engine remains the source of financial truth.
- Critical test cases passed.
- Remaining bugs documented and prioritized.
- Final documentation completed.
- Final demo prepared.
- Final status report completed.
- MVP acceptance and delivery completed.

10. Final Status Template

Day 20 Status: Final MVP review and validation completed/in progress.

Features Verified: Financial Health, Spending Patterns, Anomalies, Cash Flow, Budget Recommendation, Ask HisabDo AI, Recommendation Engine.

Integrations: Mobile and Web reviewed.

Testing: Functional, integration, edge-case, missing-data, and AI no-invention validation reviewed.

Open Issues: Documented with priority and owner.

Documentation: Finalized.

Demo: Prepared.

Acceptance: Pending final approval / Accepted.
